

## COVID-19

At the onset of COVID-19 in Canada, Unique implemented build practices to ensure the safety of our team members, fellow citizens, and communities. We continue to monitor the COVID-19 situation closely, working with our medical advisory council, comprised of experienced medical doctors, public health experts and infectious disease specialists. With their guidance, we are ensuring that Unique is taking every precaution to keep our customers and team members safe and applying the most rigorous health protocols to maintain the safety of our worksites.

Consistent with physical distancing guidelines, work will commence outside the building, in electrical rooms, and in hallways without entering suites or maintaining direct contact with residents.

Please rest assured, safety is our top priority and we are taking all necessary precautions, consistent with guidelines provided by the Public Health Agency of Canada, the Centre for Disease Control and Prevention, and the World Health Organization.

1. All technicians will be equipped with personal protective equipment, per guidelines set by the Government of Canada, including masks and gloves.
2. Work areas and devices will be sanitized each day in addition to proper handwashing and use of hand sanitizers and disinfection protocols.
3. Physical distancing practices set out by your Property Manager and limited number of technicians per floor based on building and floor size.
4. Our team members feeling ill are not to come into work.
5. Daily checkpoint with build team to discuss building/resident needs or concerns.
6. Unique inspections of work sites to ensure compliancy.
